From WikiEducat1. The diagram below has nerve cells or neurons. Add the following tags to the chart. Axon; Myelin shell; Cellular body; Dendrites; Muscle fibers; ii. If you like, the color on the chart as shown below. Axon - purple; Myelin shell - yellow; The cell body is blue; Dendrites - green; Muscle fibers - red; Now specify the direction in which the nerve impulse is moving. 2. There are three different types of neurons or nerve cells. To co-own each species with its own function. A. Motor neuron; B. Sensory neuron; C. Neuron relay; A kind of neuron function B. The sensory neuron is a nerve cell that carries impulses from the receptor of the senses to the brain or spinal cord. C. A neuron relay is a nerve cell that connects sensory and motor neurons A. Motor neuron is a nerve cell that transmits pulses from the brain or spinal cord to muscle or gland 3. Check out the descriptions in the table below with conditions in the list. The term Function B. Axon 1. Long fiber, which carries nerve impulses. J. Nerve 2. A bunch of axons. A. Synapse 3. The connection between adjacent neurons. C. Neurotransmitter 4. The chemical is released into the gap between neurons in synapses. G. Reflex 5. A quick automatic response to the stimulus. K. Myelin Shell 6. Covering the fat material that speeds up the passage of nerve impulses. Terminal 7 L. Axon. The structure at the end of the axon that produces neurotransmitters to transmit nerve impulse through the synapses. D. Nervous Impulse 8. High-speed signals that pass along the axons of nerve cells. I. Dendrita 9. Branched threads that hold nerve impulses to the cell. E. Sense Receptor 10. The organ is a sense or cell that receives stimuli from inside and outside the body. Answer 11. Reaction to muscle or gland stimulus. H. Cell body 12. Part of the nerve cell containing the nucleus. 4. The diagram below shows the cross section of the spinal cord. Add the following tags to the chart. Central Canal; White matter; Spinal root; Grey matter; Ventral root; Skin; Muscles; Sensory neuron; Relay neuron; Motor neuron; Pain receptors in the skin 5. a) A list in order to have 3 different neurons involved in the reflex arc from stimulus to response. The stimulus of the sensory neuron relay neuron of the motor neuron Answer (b) The name of 3 different reflexes found in animals. Reflex 1. A blinking reflex. Reflex 2. Paw pinch reflex. Reflex 3. Swallowing reflex as well as many others. 6. The chart below shows the horse's nervous system. Add the following labels. The brain; spinal cord; Skull nerves; spinal nerves; The sciatic nerve; Nerves of the autonomic nervous system; Wandering nerve; A network of nerves for forelimb. 7. Indicate whether the following parts of the nervous system are part of the central nervous system or peripheral nervous system (PNS). Part of the nervous system of the central nervous system or PNS? Brain CNS Vegetative nervous system PNS spinal nerve PNS spinal cord CNS Cranial nerves PNS 8. On the chart shown part of the dog's brain. Add Add in the list below and, if you like, the color on the chart as suggested. Cerebellum - blue; The spinal cord is green; Medulla oblongata - orange; Hypothalamus - purple; The pituitary gland is red; The cerebral hemispheres are yellow. 9. Compare the descriptions below with the conditions in the list. You may have to use some terms more than once. Description of the term E. Hypothalamus 1. Controls water balance and body temperature. D. Medulla oblongata 2. Where the breathing rate is controlled. C. Cerebellum 3. Where posture, balance and voluntary muscle movements are controlled. A. Cerebral Hemisphere 4. Contains centers that regulate mental activity, including intelligence, memory and learning. H. Meninges 5. Heavy fibrous envelope that encloses the brain and spinal cord. F. Pituitary 6. Master glands of the endocrine system. Hemispheres of the brain/cortex 7. Responsible for inciting voluntary movements. H. Cerebrospinal Fluid 8. The fluid that surrounds the brain and spinal cord. G. Grey Matter 9. It consists of cell bodies and nuclei. B. White Matter 10. It consists of axons. Hemisphere of the brain/cortex 11. Where the sensations of vision, sound, taste, etc. I. Ventricles 12 are interpreted. The spaces in the brain are filled with cerebrospinal fluid. K. Sulkus 13. Fold in the cerebral cortex. L. Sleeper 14. The artery that supplies the brain with oxygen. 10. Compare the descriptions below with the parts of the nervous system in the list. You may have to use some terms more than once. Description Part Of the Nervous System 1. Part of the nervous system that consists of the brain and spinal cord. B. Central nervous system 2. Part of the nervous system, which consists of cranial and spinal nerves. C. Peripheral nervous system 3. Part of the peripheral nervous system that regulates heart activity and smooth muscles. A. Vegetative nervous system 4. Part of the autonomic nervous system, which increases the heart and respiratory tract, increases blood flow to skeletal muscles and expands the pupils of the eye. E. Sympathetic nervous system 5. Part of the autonomic nervous system, which increases bowel activity and reduces heart and respiratory tract. Parasympathetic nervous system 11. Name the nerves described below using the selection in the list. Description of the nerve Vestibular nerve 1. 8th cranial nerve, which carries impulses from the organs of balance and hearing to the brain. Optic nerve 2. The second cranial nerve, which carries nerve impulses from the retina of the eye to the brain. Sciatic nerve 3. The biggest nerve in the body serving the muscles of the leg. Olfactory nerve 4. The first cranial nerve that carries impulses from the organ smell in the nose to the brain. The vagus nerve 5. The 10th cranial nerve that supplies the throats, lungs, heart, stomach and most abdominal organs. Cards interface, in particular, can be destroyed by relatively soft spikes. Spiked. All products Most of all caused by a spike in damage is caused by jumps and spikes traveling through unprotected data lines. These bursts come from a wide variety of sources, including static charge accumulation and lightning strikes. While you're unprotected, your data lines expose network maps, A/V components, modems, and other network equipment to damage electrical transition elements. Inserting ProtectNet into the data line and connecting it to the ground prevents the back door from ruining your performance and costing you money.CompatibilityStandalone suppression of data transmission to protect the network, telecommunications and PC system.
